Autumn Catalogue

ROCKMONT NURSERY

New or Noteworthy Plants
Peonies, Iris, Etc.

D. M. ANDREWS, Owner
P. O. Box 493
Boulder Colorado

INFORMATION

The simple requirements of successful business are mutual benefit combined with courtesy, honesty, efficient service and business economy. Without economy of operation no business can long survive; hence, the following rules:

Order early. I aim to time deliveries to suit the convenience of purchasers, but the inevitable rush season can be partly overcome if patrons will anticipate their wants, order early, and accept delivery when most practicable.

Size of order—Forwarding. Orders for seeds amounting to less than one dollar, or plant orders less than two dollars, are not solicited; however, I am always glad to accommodate in the matter of small orders. Seeds are delivered anywhere post-paid. All other stock is forwarded at purchaser's expense. Shrubs and other heavy stock should be sent by express. Because of light but efficient packing the cost of transportation should seldom exceed 15% of the value of shipment, and often will be less. Peonies, Iris and other flower roots can be sent by parcel post at an additional cost to be added to the value of the order as follows:

To points west of the Mississippi, add 5%.

To points east of the Mississippi, add 10%.

Note. Allow postage on peonies priced at \$1.00 or more at 10 cents per root instead of the percentage charge.

Cash or Credit. Always send cash in full with small orders. Business economy demands the observance of this rule. I prefer not to open accounts for less than \$10.00. Institutions whose regulations do not permit payment in advance, and individuals or firms who desire credit, will oblige by ordering early enough to allow investigation. No perishable goods sent C. O. D.

Errors. Report errors or other claims promptly. Promptness will assist in making corrections that will be satisfactory. Always keep a copy of your order for comparison.

Guaranty. I guarantee safe arrival of packages by parcel post or express. I do not hold myself responsible for failures after goods have been delivered in good condition. Unless notified promptly, I shall assume safe arrival.

Correspondence. To insure prompt attention to all orders and correspondence, please use my personal address, D. M. Andrews, P. O. Box 493, Boulder, Colorado.

NEWS OF THE NURSERY

1925 at Rockmont Nursery will go down in history as a noteworthy year. First, it has established without question the success of "New or Noteworthy Plants" as a nationally advertised feature of the nursery. True, the idea was going strong in its infancy, but in its fourth year this feature is what the nursery stands for outside of Colorado. As sometimes happens, the tail is beginning to wag the dog.

The second noteworthy event is the new residence and office completed early in the year at the nursery, and which are now definitely assuming the attributes of "home" in the best sense of the word. Living now literally "on the job" it seems superfluous to promise better service, but this is what we hope to render because of the change.

Another important improvement is the extension and better equipment of the overhead irrigation system. This is far more important where irrigation is the one essential requisite for plant growth than in a climate where rainfall is nearly sufficient. Perfect control of moisture conditions in an otherwise ideal climate is the practical insurance of perfect stock, which it is our aim to supply. Besides being able to create artificial showers, the nursery has valuable ditch rights so that any part of the nursery can be irrigated in the usual way, by running a stream of water along each row. The showers, however, are a distinct advantage for the propagating grounds and for other closely planted areas where there is not room for ditches.

Like any other innovation, the New-or-Noteworthy-Plant feature brings up problems which must be studied in their relation to the best interests of the customer and the general welfare of the establishment. The solution of these problems as we meet them will be reflected from time to time on the pages of the catalogue. Our catalogue is not only "delightfully different," as someone expressed it, but you will easily discover that it is not merely a reprint if you read it from season to season. We intend that our only authorized salesman shall bring you a real message.

Our invariable policy has been to supply the best. The best is always noteworthy, whether new or old. Because the best can be proven only by trial, our grounds have always been by way of an experiment station for the testing and comparison of novelties from whatever source. Our two principal sources of novelties are, first, the ornamental

native plants of the Rocky Mountain region; and second, new varieties created by breeding and selection, which for many years has been an important activity of the nursery.

In order to apply the policy of supplying the best in a true and broad sense, it is necessary to eliminate constantly everything that proves unworthy or inferior. This will be approved by the conservative planter, because it keeps the lists of varieties within reasonable bounds and offers the farther assurance that no mistake can be made in buying anything or all that is offered. This critical attitude on the part of the nursery management constantly exercised, has the tendency to reduce criticism from outside sources. We are our most severe critics.

Next January, in the general catalogue, I want to tell you about "The Angel of Shavano Mountain," and an Indian legend in connection with it. The thoughtful study of a primitive people, or a wild flower, or any other elemental expression of Nature, will bring a wealth of simple beauty into one's life.

PEONIES AND THEIR CULTURE

Ranking highest in value among hardy flowers, the Peony is easily grown and is remarkably free from disease and insect pests. Only a few simple requirements need be observed to assure success, and no flower so lavishly repays the moderate outlay.

Peonies prefer a deep, well drained soil, in full sun, fairly rich and of medium texture, neither very heavy nor very sandy. Manuring is not recommended at the time of planting nor subsequently as long as the plants maintain a satisfactory growth. Bone meal and sheep manure are probably the safest fertilizers to use. Plant two to four feet apart, covering the eyes only two or three inches when the ground is leveled.

Water freely during the blooming season and enough during the two months following the blooming season to maintain an active condition of the foliage. This is important because neglect at this time is often responsible for failure to bloom the next season. Peonies make their rank, rapid growth in the spring on "stored up energy." The root system of a peony plant is a storage battery and must be charged with energy during the two months following the blooming season. Remember to water regularly but not excessively during July

and August and your peonies will be running over with "pep" the next June.

Size of roots,—Planting Season. I offer roots for fall planting only; spring planting is not recommended. Our shipping season is from September 15 to about December 1. Standard divisions have 2 to 5 eyes, with a portion of root large enough to insure a strong growth, usually with a few blooms the first season. Our 1-year clumps are standard divisions grown one year in the nursery, are much stronger, have a complete new root system and are more certain to bloom. A 1-year clump can usually be divided if so desired. These two grades, standard divisions and 1-year clumps, are the best for planting. So-called 1-eye divisions will prove a disappointment, and large clumps seldom recover well after transplanting.

PRICE LIST OF PEONIES

The figures preceding the name indicate the comparative rating authorized by The American Peony Society. Ten points indicating perfection of plant and flower, the higher grades designate the better varieties. Note the high average grades of my stock.

The price following the description is for one standard division; six of one kind will be sold for the price of five. For 1-year clumps of all varieties offered add 50% to the price each; thus a 1-year clump of Albert Crousse listing at \$1.00, will cost \$1.50; La France at \$5.00 will cost \$7.50 for a 1-year clump.

In comparing the various Peony lists that come to my desk, I note quite a wide range of variation in prices. Seeing one variety quoted at a lower price than usual, I learned upon inquiry that the stock had been sold. Bargain hunters occasionally pick up a few things at low prices, but there is evident advantage in placing your order where it can be filled complete, true to name, in the best standard grades. Knowing the Peony market over a period of years and having experience with the quality of stock sent out by various growers, I unhesitatingly insist that I am offering exceptional values in Peonies, not in a few varieties, but through the entire list.

Postage additional if wanted by mail.

JAPANESE PEONIES

<i>Apple Blossom.</i> (Rei-Kai-Zan)	Pale pink---	\$10.00
<i>Distinctio</i> n.	Ligulate, deep pink-----	5.00
<i>Fuyajo.</i>	Ligulate, very dark red-----	6.00
<i>Isani Guidui.</i>	Pure white, cream center--	7.50
<i>King of England.</i>	Ruby-red, yellow petaloids	6.00
<i>Margaret Atwood.</i>	Large, pure white-----	10.00
<i>Mikado.</i>	Very brilliant red and gold-----	1.50
<i>Neptune.</i>	Deep rose, creamy center-----	2.00
<i>Saturn.</i>	Light pink, cream center-----	2.00
<i>Snow Wheel.</i>	Large pure white-----	1.50
<i>Yeso.</i>	White, ligulate center-----	3.00

EARLY-FLOWERING PEONIES

<i>Brownii.</i> Interesting species from Oregon	-----	\$ 2.00
<i>Tenuifolia fl. pl.</i> Earliest double red-----		2.00
<i>Officinalis Alba Plena.</i> Blush, fading white--		1.50
<i>Officinalis Mutabilis.</i> Deep pink-----		1.00
<i>Officinalis Rubra.</i> Double red-----		1.00
<i>Officinalis.</i> Single red, yellow stamens-----		2.50

NEW JAPANESE PEONIES

Recognizing the indescribable charm of Japanese Peonies, I first planted seeds in 1909. By the time the first seedlings bloomed I had, not only better varieties to breed from, but I began a careful study of Mendel's Laws of Inheritance, then recently published, having access to a full line of valuable literature through the University of Colorado. Applying scientific methods to the breeding of Japanese Peonies, it has been possible to accomplish very definite results with a minimum of experimentation, and with a corresponding saving of time and space; because comparatively small cultures are required. Even more wonderful than the successful combination of two or more desired characters in one individual, is the emphasizing or augmentation of such characters as the fimbriate center, both as to texture and length of filament. **Shavano** has the largest and fullest center of any Japanese Peony I have seen. **Calypso** is almost equally full, and **Carrizo** is distinct from anything yet produced. I have selected the three as representing the best and most distinct of my true Mendelian second-generation hybrids, and each is a noteworthy example of scientific breeding.

I have decided to permit the distribution of not more than five (5) sets, autumn of 1925, only one set to a customer, rather than to wait till they could be sold at a lower price. I shall furnish 2-3 eye divisions cut from strong two-year clumps. Either variety at the price named, or the set of three varieties, one each, for \$225.00.

Calypso. (Andrews 1925) Mid-season Japanese variety of large size with strong stems of medium height. Guards pale amaranth pink. Center Tyrian pink to Tyrian rose, of long fimbriate narrow stamenodes, slightly marked with yellow. The unusual and pleasing color contrast in the flower, its large size and very full center and fine carriage combine to make this an outstanding variety in any Japanese collection. 2-3 eye divisions, \$75.00 each.

Carrizo. (Andrews 1925) Ligulate Japanese, medium to large size with stiff stems of medium height. Guard petals in a double row, rose color to rose red, center of the same color, only the tips yellow. The short center ligules are broad at the tip and heavily encrusted with golden anther material, the wavy outlined pattern thus produced suggesting threads of gold, and the name Carrizo, a Navajo Indian clan who are weavers of wonder-

ful blankets in which the design is outlined with a single thread of a different color. 2-3 eye divisions, \$75.00 each.

Shavano. (Andrews 1925.)—Lofty mountain of Colorado. The most beautiful and perhaps the largest among more than 25 Japanese varieties. Midseason variety with tall stiff stems. Lateral flowers almost as large as the first blooms, extending the season to the very latest. Guards large and overlapping, clear brilliant amaranth pink, of very durable color and texture. Center composed of extra long ligules, laciniate at the tips, of the same color as the guards but heavily edged with gold. The exceptional size and fullness of the center, the brilliant contrast of red and gold, the long season of bloom and ideal habit of the plant are little short of perfection. 2-3 eye divisions, \$100.00 each.

PEONY INTRODUCTIONS, 1923

This set of four seedling peonies was introduced the fall of 1923 and all were sold that I had to spare. I can now offer ten more of each variety at the prices named, or will furnish the set of four to one address for \$40.00. I am sure that after the blooming season next year a higher price will be warranted. Size of roots will be 2-3 eye divisions from 2-year clumps.

Hespanola. (Andrews 1923) Deep uniform shell-pink (Pale Amaranth Pink) shaded deeper; very large full rose-type; free bloomer in clusters on strong stem. Blooms with Marie Lemoine or later. A magnificent flower which opens gradually but freely, building up a perfect center with no stamens. \$7.50 each.

Manitou. (Andrews 1923) A full rose-type which develops slowly a very high center nearly as broad as the guards, the latter reflexing, producing a large flower of great depth. Color Cameo-pink, bleaching slowly to blush-white; exquisite rose fragrance. Stem very strong, of medium height, profuse and regular bloomer; a row of established plants is a mass of bloom. \$7.50.

Nimbus. (Andrews 1923) Rose or bomb-rose type; a large, very full flower of durable texture. Opens slowly but freely, with no stamens nor carpels. Color white, with the center deepening to palest blush-buff. Good strong erect habit, free bloomer with few laterals. Late to very late, tall, with strong stems which support the heavy flowers. \$15.00.

Snow Rim. (Andrews 1923) A flower of peculiar charm, pure paper-white, three or four rows of broad petals and a center of yellow stamens. Slightly incurved, the perfection of form and charming color effect are unequaled. Late mid-season, a profuse bloomer, strong, mostly one-flowered stems of medium height and ideal habit. \$15.00.

IRIS INTRODUCTIONS

With the present multiplication of iris varieties there is no point in presenting for approval anything but the best. Mr. John C. Wister, President of the American Iris Society, has expressed very high appreciation of **Odaroloc**, and it was again the most outstanding variety in my garden last season. **Ophir Gold** was by far the best yellow of deep color and the latest of the yellows. **Tansy** is an early yellow, not quite as tall as **Ophir Gold**. Some say this is too near Sherwin Wright; I think it quite superior. Try it yourself for a dollar bill.

Next year I expect to introduce the best white Iris I have ever seen, the best of 35 white seedlings, an ideal plant and flower of pallida type with flaring falls. I want an appropriate name not already used, and will give one plant free to the person proposing the best name. The right is reserved to make use of any other names than the one accepted. Acknowledgment will be made in the fall catalogue of 1926, at which time the prize plant will be delivered. Competitors for this prize are not required to be purchasers; merely say, "I suggest for your white seedling iris, No. 85, the name-----."

Ophir Gold. (Andrews 1925) --Golden yellow flowers of pure color without veining, borne on 33-inch stems. Compared with Sherwin Wright, the flower is larger and ten days later. Departing in habit from the usual stiff and contracted inflorescence of the Variegata group, this excells in graceful carriage and is a most profuse bloomer, with flowers of exceptionally good substance. It increases freely, and having a fairly large stock, I offer good single roots at \$3.00 each, 4 for \$10.00, \$30.00 per dozen.

Odaroloc. (Andrews 1924) Seedling of a tall white plicata, fertilized from another white seedling. Although resembling a pallida, it has directly no pallida nor Caterina inheritance. Height 46 inches, pure self color, light mauve to lobelia-violet. Both standards and falls measure $2\frac{1}{2}$ inches wide and $3\frac{1}{2}$ inches long. The 8 or 9 enormous flowers are borne on very strong erect stems

well above the 30-inch glaucus foliage. The lower branches are rather long, carrying the flowers high without crowding. The flower is well arched, symmetrical, with flaring falls, good heavy substance, orange beard. Growth exceptionally vigorous forming well balanced clumps and a good multiplier. Strong single roots. \$5.00 each, 3 for \$12.50, \$50.00 per dozen.

Tansy. (Andrews 1925) For local use I recommend this as superior to Sherwin Wright, being of clearer color, taller and of better substance. I have a fairly large stock and offer at a conservative price. Perhaps it is worth the dollar to try what I believe to be the best early yellow. Single roots \$1.00 each, 12 for \$10.00, \$75.00 per hundred.

GENERAL COLLECTION

TALL BEARDED IRIS

My general collection is not intended for the fancier, but it contains the best of the older varieties, and some of the better new varieties of established value. My stocks are true to name, in perfect health, and because of large production I am able to quote attractive prices.

NEW OR NOTEWORTHY FLOWERS

Included in the following list are hardy perennial flowers, many of which are native of the mountain region, and which have proven their worth for the garden. This list must vary from season to season according to my stock. It is obvious that sold-out items cannot be replaced from the stocks of other growers because there are no such stocks to draw from. To avoid possible disappointment, place your order promptly.

Postage or expressage additional; five of one kind at the ten rate. See spring catalogue for descriptions.

	Each	Ten

NEW OR NOTEWORTHY SHRUBS

Good shrubs for landscape planting, and especially shrubs of small stature suitable for rock gardening, are limited to comparatively few species. The need for new kinds to contribute variety to our plantings is therefore evident. Attention is called to the large number of shrubs in the following list that are practically new to cultivation, and which are nowhere else offered. Most of these are described in the spring catalogue, mailed free upon request. A more general list of shrubs will be included in the spring catalogue to be issued next January.

	Each	Ten
<i>Amorpha nana</i> -----	\$.75	\$6.50
<i>Ampelopsis saintpauli</i> (creeper)-----	.75	6.50
<i>Caragana aurantiaca</i> -----	.60	5.00
<i>Cercocarpus montanus</i> -----	.75	6.50
<i>Clematis graveolens</i> (yellow fls.)-----	.75	6.50
<i>Clematis ligusticifolia</i> -----	.75	6.50
<i>Cornus stolonifera Coloradensis</i> -----	.75	6.50
<i>Corylus rostrata</i> (heavy clumps)-----	1.50	---
<i>Crataegus coloradensis</i> -----	1.00	---
<i>Crataegus erythropoda</i> -----	1.00	9.00
<i>Crataegus rivularis</i> (4-6 ft.)-----	1.25	10.00
<i>Crataegus saligna</i> -----	2.50	---
<i>Forestiera neomexicana</i> (2-3 ft.)-----	.75	6.50
(1-2 ft., \$30.00 per C; 2-3 ft., \$50.00 per C.)		
<i>Holodiscus microphyllus</i> -----	1.00	---

	Each	Ten
<i>Jamesia americana</i>	1.00	---
<i>Ligustrum vulgare leucocarpum</i>	.75	6.50
<i>Lonicera involucrata</i>	.75	6.50

<i>Rosa lucida alba</i>	1.00	---
<i>Rosa lucida inermis</i>	.75	6.50
<i>Rosa melina</i> (new introduction)	1.00	9.00
<i>Rosa stellata</i>	1.00	9.00
<i>Rubus deliciosus</i>	1.00	9.00
<i>Salix brachycarpa</i>	.75	6.50
<i>Salix glaucops</i>	1.00	9.00
<i>Salix terapla</i>	1.00	9.00
<i>Shepherdia argentea</i>	.75	6.50
<i>Symphoricarpos occidentalis</i>	.75	6.50
<i>Symphoricarpos oreophilus</i>	.75	6.50
<i>Symphoricarpos pauciflorus</i>	.75	6.50
<i>Symphoricarpos utahensis</i>	.75	6.50
<i>Symphoricarpos vaccinioides</i>	.75	6.50
<i>Symphoricarpos vaccinioides</i> decumbens	.75	6.50
<i>Symphoricarpos vulgaris alba</i>	1.00	9.00
<i>Sym. vulgaris</i> (long raceme)	.75	6.50
<i>Viburnum americanum</i>	.75	6.50
<i>Vitis rupestris</i> (a western form)	.75	6.50
<i>Vitis vulpina</i>	.75	6.50

A NOTEWORTHY SHRUB

Betula glandulosa. Alpine Birch. A dwarf shrub of the far north, extending south in the mountains to Colorado. A most attractive and valuable bushy shrub about two feet tall with a spread of three feet. A native of wet places but thriving under ordinary garden conditions. It is easily grown, has excellent foliage, no apparent faults, and is worthy of careful trial. Bushy clumps, a foot broad, \$1.00 each, 10 for \$9.00.

SEEDS

The seed list of last spring, beginning on page 15 of "New or Noteworthy Plants," will continue in effect until the publication of my new January catalogue. New-crop seeds will not be ready for distribution before the end of the year. New offerings and changes cannot be announced at this time. Quite invariably in my own planting, seeds of the previous season's growth show perfect germination. Prepare ground carefully, cover lightly, in hot weather shade with lath or muslin, water regularly, never allowing the seed bed to dry out. A little neglect insures certain failure.

GENERAL LIST OF PERENNIALS

A very complete list is included in the general catalogue of Rockmont Nursery of last spring, a copy of which will be mailed upon request. Orders for fall planting will be accepted from that list, except items superceded by this list in hand.
